

Glenn Paul Sumido

LEAD FRONTEND DEVELOPER

Toronto, ON · 613-700-7474 · psumido@gmail.com · linkedin.com/in/paulsumido · github.com/gpbsumido · paulsumido.com · paulsumido.com/thoughts

SUMMARY

Frontend engineer with 9+ years building data-intensive web applications in React and TypeScript. Frontend lead on enterprise SaaS – conversational AI interfaces, large visualization dashboards, and a framework-agnostic design system spanning React and Angular. Primary author of two public npm packages: a client analytics SDK and that design system. Deep focus on performance, automated testing, accessibility, and turning ambiguous product goals into production-ready experiences.

SKILLS

Languages	TypeScript, JavaScript (ES2023), HTML5, CSS3 / Sass, Python, SQL
Frameworks & UI	React 19, Next.js, Angular 21 (signals, zoneless, SSR), Redux, Zustand, TanStack Query, MUI, Tailwind, Framer Motion, GSAP
Design Systems	Design tokens, CSS custom properties, component library architecture, Storybook, Figma, WCAG accessibility
Data & Viz	Custom SVG charting, ECharts, Recharts, Chart.js, ag-Grid, Three.js / React Three Fiber, MapLibre / Leaflet
APIs & Data	REST, GraphQL, Zod validation, Auth0, BFF auth pattern, Node.js / Express, PostgreSQL
Testing	Vitest, Jest, React Testing Library, MSW, Playwright, Cypress, mutation testing
Tooling & Infra	Docker, AWS (Amplify, S3), Vercel, Railway, CI/CD, real-user Core Web Vitals monitoring

EXPERIENCE

Helika – Senior Software Developer (Frontend Lead)

Jun 2023 – Feb 2026

Web3 gaming-analytics SaaS · Calgary (Remote)

- Led frontend development of Helika's enterprise gaming-analytics platform as top contributor across its core apps: 456 of 829 commits (~55%) on the ~100K-line analytics portal and 2,300+ commits on the ~93K-line AI content platform, shipping 170+ tracked feature tickets in React, Next.js, and TypeScript.
- Designed and shipped **Helika AI**, a production conversational analytics assistant clients use to query game data in natural language and receive live, interactive artifacts – charts, dashboards, leaderboards, config changes – rendered inline in chat.
- Architected the chat around a decoupled controller / state machine, letting the UI swap a single chat endpoint for a session-scoped multi-agent backend without a rewrite.
- Built the portal's drag-and-drop Dashboard and Visual Designer (ECharts, ag-Grid, gridstack) and a reusable 15-component charting library powering game, web, and on-chain dashboards of 20+ visualizations each, serving studios including Nexon.
- Drove portal-wide performance work: rewrote the 3,600-line API/query layer in a 107-file refactor with a net code reduction, built a data-service cache-busting system, eliminated redundant network calls, and modularized monolithic components.
- Hardened the product with response streaming, Auth0 authentication, and Sentry monitoring; shipped investor-facing features through multiple fundraising rounds.

Refmint – Frontend Developer

Feb 2022 – Jun 2023

Referral and rewards platform · Vancouver (Remote)

- Built data-heavy React applications with a strong focus on performance, improving page load times ~40% through lazy loading and caching.
- Built and maintained a reusable UI component library shared across internal and customer-facing applications; streamlined delivery with automated CI/CD build pipelines.

PeopleInsight – Front-End Developer (Analytics)

Apr 2017 – Jan 2022

Enterprise HR analytics · Ottawa

- Built interactive dashboards for enterprise HR analytics in React, partnering with UX designers to turn complex requirements into intuitive interfaces.
- Developed survey-driven data-collection workflows with validation logic and automated testing, and automated data-processing pipelines that reduced manual effort and improved data quality.

OPEN SOURCE

- helika-web-sdk** – Primary author of Helika's public web SDK (175 of 197 commits, 84 merged PRs), published to npm as **helika-sdk**; also authored the public **sdk-demo-react** and **sdk-demo-nextjs** reference integrations. github.com/getlidar/helika-web-sdk

SELECTED PROJECTS

- Paul Design System** – paulsumido.com/design-system · github.com/gpbsumido/paul-design-system – Framework-agnostic design system published to npm as **@paul-portfolio/{tokens,css,react,angular}**: design tokens compiled to CSS custom properties, feeding 33 React and 33 standalone Angular components, including 11 chart types drawn from a shared SVG geometry layer with no charting library. Zero runtime dependencies, 82 test files, Storybook.
- paulsumido.com** (live) – Next.js application with 106 routes and 62 API routes: BFF auth pattern with no tokens exposed to the browser, GraphQL gateway, feature flags with an audit trail, and a real-user Core Web Vitals pipeline reporting P75 by route and release. 238 test files plus Playwright end-to-end coverage.
- angular-paul** – live at angular.paulsumido.com · github.com/gpbsumido/angular-paul – macOS-style desktop-OS portfolio in Angular 21 using standalone components, signals, zoneless change detection, and SSR with incremental hydration.

EDUCATION

Bachelor of Engineering – Communications Engineering, Carleton University, Ottawa

2013 – 2018
